## QUESTION:

Imagine that you're going out with a friend. You want to go to the movies and relax. However, your friend wants to go shopping, because they're attending an important event that evening and want to find a really nice outfit. Of course, you have no time to do both things. How do you decide where you're going?

*Now participants have to positionate in the animals' space.*

Now, let's imagine the second scenario: everything's the same except that today's the last day that movie is playing! And you really want to see it... What would you do this time?

*Now participants have to positionate again in the animals' space. They can decide to move or to remain in the same position.*
